## Day 1

**Thursday 8th November**

London. Grey & cold

Eileen and Margaret had left on an earlier flight, but the rest of us met up and boarded the uneventful 1900 Kenya Airways flight to Nairobi.

## Day 2

**Friday 9th November**

Near Arusha via Nairobi

Warm with sunny periods

Our 2.5 hour wait at Nairobi airport in Kenya gave us the chance to tick off our first African birds; Red-winged Starling and Little Swift, the latter nesting under the eaves of the airport terminal. The short flight to Kilimanjaro Airport gave us a fine view of Mount Meru and a glimpse of the top of the iconic Kilimanjaro itself. On arrival, the walk to the arrivals lounge, and then to the transfer minibus, gave us our first Tanzanian birds; Common Fiscal, Fork-tailed Drongo and Superb Starling. Just under an hour's drive brought us to the Mountain Village Lodge overlooking Lake Duluti. Here we met up with Eileen and Margaret and had a light lunch before regrouping in the late afternoon for a stroll down to, and partly around, the lake.

Before we had even left the lodge car park we had seen African Olive Pigeon and a Lanner Falcon dashed overhead. Around the lake there was a fair deal of birdlife including White-eared Barbet, Grosbeak Weaver, the very localised Taveta Golden Weaver, Great and Long-tailed Cormorant and a pair of stonking Giant Kingfishers! After dinner, most people gathered to tick off the checklist for the day and then it was off to bed for a much needed sleep.

## Day 3

**Saturday 10th November**

Arusha National Park

Cloudy with light showers

A quick post-breakfast walk gave us excellent views of Brown-breasted Barbet, Silvery-cheeked Hornbill and a Red-headed Weaver (sadly the less showy female).

We met our driver/guide Hassan and, while waiting for our packed lunches, we saw Peter's Twinspot and Amethyst Sunbird in the car park. Soon after, we were at the entrance gate of Arusha National Park. Whilst Hassan was sorting the permits, we were watching Tacazze Sunbirds and Baglafaect Weaver nearby. Not far from the gate we saw our first mammals; a mixed herd of Cape Buffalo and Burchell's Zebra. We were heading for the rim of the Ngurdoto Crater but progress was slow as there were plenty of birds to see on the way including Auger Buzzard, Yellow-throated Longclaw, Black Saw-wing, African Stonechat and a stunning Golden-winged Sunbird. The rim itself offered a fine view, but only a few birds; White-eyed Slaty Flycatcher and African Black-headed Oriole.

Our next scheduled stop was lunch at Small Momella Lake but it was still rather slow going with stops to see Martial Eagle, Hottentot Teal, Red-knobbed Coot, Cinnamon-chested Bee-eater, a band of Banded Mongoose and a troop of smart Eastern Black & White Colobus crossing (aerially) the track in front of us. At Small Momella Lake we had our picnic lunches in the company of White-browed Scrub Robin, Tropical Boubou and, more distantly, Southern Pochard, Ruff, Marsh Sandpiper and Masai Giraffe.

At the nearby Big Momella Lake, there were large numbers of Flamingos (mostly Lesser but with a few Greater) and a scattering of Cape Teal. We then headed for the Momella gate and picked up a ranger who took some of us on a short hike that gave us excellent views of Pangani Longclaw, Banded Martin and a striking Black Cuckoo-shrike. Then it was back to Mountain Village Lodge (with Red Duiker and Kirk's Dik-Dik on the way) for washing, dinner and species listing.

## Day 4

Sunday 11th November

### Arusha to Tarangire National Park

#### Cloudy with showers but clearing to sunny

We left Mountain Village Lodge early for the relatively short drive to Tarangire NP. En route we saw a handful of new birds of which the Eastern Chanting Goshawk was probably the most notable, especially for Margaret being one of a fair few 'lifers' she was hoping to see. At the park gate there was a whole host of birds just waiting to be seen including Slaty-coloured Boubou, Yellow-collared Lovebird, Lesser-striped Swallow, Red-cheeked Cordonbleu and a very tame Spotted Morning-thrush.

Once in the park proper, progress was yet again slow as there was so much to see, particularly the elephants all around and lots of lovely birds including a pair of perched Gabar Goshawk, one in its usual grey and white regalia and one a jet black melanistic variant. Wahlerberg's Eagle, Lappet-faced and White-backed Vultures were also seen before our arrival at the smart Tarangire Sopa Lodge complete with Rock Hyrax and Rock Agamas on the roof. A late lunch was taken while watching swooping Little Swifts.

Not long after lunch we set off on the afternoon's game drive (after watching a Bare-faced Go-away-bird run around a tree in the car park). This was studded with a host of bird sightings which included Red-and-yellow Barbet, Speckle-fronted Weaver, Silverbird, White-bellied Bustard, a sleepy looking Verreaux's Eagle-owl and an Ostrich with little chicks. The Impala and Vervet Monkeys that we saw also had cute youngsters.

## Day 5

Monday 12th November

### Tarangire National Park

#### Hot & sunny

An early start and off towards Larmakau swamp. We soon came across a family of Bat-eared Foxes at their den entrance. They use their huge ears to listen for their prey - mainly insects. As we slowly made our way towards the swamp there was plenty to see – Black Stork, Pallid Harrier, D'arnaud's Barbet, Secretary Birds, Pygmy Falcon, White-bellied Go-away-bird and Black-faced Sandgrouse, to name but a few. The swamp itself was relatively quiet, but we did manage to see Isabelline Wheatear, Eastern Dwarf and Banded Mongoose.

After lunch and a siesta we tootled off again. Not long after we started (and having seen a lovely Brown Snake-eagle) there was a report of Leopard at the swamp we had been to in the morning. We decided to make a bee-line for it. On arrival, all we could really see was something like a spotty log! However, with patience (45 minutes) the 'log' finally got up, stretched, climbed an adjacent tree and lay down on a big branch to continue its sleep...with all four legs dangling – well worth the wait.

As dusk fell we quickly made our way back, spotting Red-bellied Parrot, Black-bellied Bustard and finally, Elephants in the sunset.

## Day 6

Tuesday 13th November

### Tarangire to Lake Manyara National Park

#### Hot & sunny

We left the Tarangire Sopa Lodge after a hearty breakfast. On our way to the gate it was good to see our first Black-backed Jackal and Steinbok, with its 'bambi' eyes and unfeasibly large and beautifully patterned ears. An African Cuckoo also very obliging perched in a nearby shrub, allowing confident identification. Nearing the gate, we spotted a pride of Lions on a nearby hillside. Much as they wanted to lie around and sleep, they were not being allowed to by a herd of Elephant that kept moving them on – it did mean we got decent views and we counted a maximum of nine. At the park gate, a little wander gave us excellent views of a Red-chested Cuckoo, which we had heard but which can be very hard to see, so we did well.

The drive to Lake Manyara Hotel was punctuated by Masai Giraffe and a lovely Black-shouldered Kite. We arrived in good time for lunch and a short relax. The hotel is perched at the top of the Rift Valley escarpment, high above Lake Manyara National Park and the views are spectacular. Early in the afternoon we prepared for departure, ticking off Collared and Amethyst Sunbird in a flowering Jacaranda and nearly losing a bag out of the open-doored van to a large marauding baboon!

We descended the escarpment to visit the park below us. At the gate there was a very obliging Blue Monkey in a small tree above the office. Driving through the rather dense and dark forest (growing here because of groundwater close to the surface) it was hard to spot anything small, so we 'made do' with Elephant.

Around the hippo pools the vegetation opened out and, as well as Hippopotamus, we saw a whole host of birds including Spur-winged Lapwing, Kittlitz's Plover, Water Thick-knee, Double-banded Courser, Ruff, loads of Collared Pratincoles and two gorgeous Grey-crowned Cranes. There was also our first of what was to be very many Thomson's Gazelle. After watching a juvenile Marshal Eagle bathe in a river pool, we left the park at around 1830 and climbed the spectacular escarpment again, back to our hotel.

## Day 7

Wednesday 14th November

### Lake Manyara to Serengeti National Park

Hot & sunny am, a little cloudier pm

After breakfast we had a quick bird walk around the hotel, taking in White-headed Barbet and Black-backed Puffback, before our departure for the Serengeti... we got as far as just beyond the hotel gate before we stopped to see a host of small birds that included Blue-capped Cordonbleu, White-bellied Canary, Streaky Seedeater and a glimpse of a lovely Chestnut Sparrow. Moving on a short way, we stopped briefly at a roadside curio shop to allow some of the group to buy a few gifts and then it was off again. The route to the Serengeti National Park is via the Ngorongoro Conservation Area. The tarmac ended at the Lodware entrance gate to the Conservation Area. Not long after, on the dirt road, we had a puncture which was quickly fixed. Soon after entering the Serengeti National Park we saw our first Grant's Gazelle, as well as ever increasing numbers of Zebra, Blue Wildebeest, Thomson's Gazelle, a few Coke's Hartebeest and, oddly for this part of the park, a lone Black Rhino, standing, seemingly lost, in the middle of the endless plain. At a waterhole, there was a pride of Lions, including a stately male. All this and we had yet to pass the Naabi Hill entrance gate which is a fair few kilometres beyond the actual park boundary. When we did get there, the relative abundance of water and food (it includes a picnic area) attracted a variety of birds (African Morning Dove, Hildebrandt's Starling, Silverbird and African Citril) and a fair number of rather cute African Grass Rats.

We arrived at Seronera Lodge (built around one of the granite outcrops, commonly referred to as kopjes) for a late lunch. After a short rest, we were out again and seeing Woodland Kingfisher, Fischer's Lovebird and Topi before a call over the radio of Cheetah, so, just as for Leopard a few days back, off we went. Shortly after, we were looking at a very flat looking Cheetah lying sleeping and only occasionally raising its head. Doubling back on ourselves we found a further two nearby who did a bit more by way of sitting up or having a little wander about, so we got decent views. As the afternoon drew on we reluctantly started to head back, only to find three more Cheetahs, a mother and two well grown cubs, near the trackside – an excellent view. We didn't miss out on birds, adding Lesser Kestrel and Montagu's Harrier to our burgeoning list. Marabou Storks in an acacia backed by a pink African sunset was the perfect ending to a great afternoon.

## Day 8

Thursday 15th November

### Serengeti National Park (Seronera area)

Hot & sunny

Readying ourselves for the off, we saw Grey-headed Social-weaver and Speckle-fronted Weaver in the car park. After departure, it was not long before we came across a male and female Lion who promptly decided to mate – given they mate every 20 minutes or so, when the female is receptive, this should not have been a big surprise.

We stopped for a while to look at birds on one of the river dams. There were many Black-headed Herons present and, in a nearby by pool, a Yellow-billed Stork was having great fun and games trying to swallow a large catfish it had caught. We waited for a while as it continually repositioned the huge fish but after 10 minutes we decided it was not worth the wait to see if it ever managed to get it down... there was a Leopard to see! This one was in a tree and not doing much, but it was good to see none the less.

Idling along a track we chanced upon a Serval that crossed just in front of us and started hunting in the long grass. We watched while it stalked around and then did its characteristic leaping pounce... but failed to catch the prey. It was a real stroke of luck to see this smart cat. Not much further on we came across three very muddy Spotted Hyenas right next to the track, shortly followed by at least eight others lined up and wallowing in mud in a trackside ditch. What a sight as they jostled for the best muddy spot!

Making our way slowly back for lunch, we came across some Lions on a kill but they were quite well hidden in long grass so we concentrated on the birds and added Hooded Vulture, Red-billed Duck, Grey Kestrel and Beautiful Sunbird to our list.

Post lunch, we made our way to the nearby Serengeti Visitor Centre also based around a kopje and with a self-guided walk up and around it. Here there were Vitelline Masked-weaver, Red-fronted Barbet, White-browed Robin-chat and some very entertaining and tame Eastern Dwarf Mongoose. As we prepared to leave, an Ovambo Sparrowhawk was spotted trying to rip into a weaver nest, but it was disturbed by a staff member before it managed to get inside.

On the leisurely drive back there were some lovely Wire-tailed Swallows, a Striated Heron, a Dark Chanting Goshawk, Bat-eared Foxes and all topped off by Topi silhouetted in another glorious pink African sunset.

## Day 9

Friday 16th November

Serengeti National Park (Seronera to Lobo area).

Hot & sunny

A quick pre-breakfast walk gave us views of Red-fronted Barbet, Red-rumped Swallow and distant Masai Giraffe. After breakfast we set off on our transfer to Lobo Lodge in Northern Serengeti, but we were going to take our time getting there for lunch, so there was plenty of wildlife viewing. We soon came across a large herd of wildebeest, perhaps a few thousand strong. It was hard to tell in the undulating scrubland, but gave us a flavour of the vast herds soon to gather on the plains to the south.

Our next stop was the Retima Hippo Pool. Although it was pungent with the smell of nearly 200 hippo crowded into a rather small pool, we stayed for about half an hour watching them interacting and spotting the lone Nile Crocodile. There were then several short stops to add more birds to our list including the endemic Grey-breasted Francolin, an unfeasibly coloured Purple Grenadier (another 'lifer' for Margaret), Green Woodhoopoe, White Stork, dinky Red-throated Tit and the often heard but seldom seen, Dideric Cuckoo. We also came across a chameleon crossing the track (Flap-necked?) and an Elephant herd that included a tiny calf never straying far from the safety of its mothers legs – it's amazing she did not trip over it!

Lobo Lodge is also wrapped around a kopje and we were 'welcomed' by Rock and Tree Hyrax. After lunch we had a bit of a siesta and then around 1600 we were off out again. On nearby rocks there were small but stout Klipspringers and several new birds for the trip including Cinnamon-breasted Bunting, Marico Sunbird and Greater Blue-eared Glossy-starling. We then came across around six Lions, but they were doing what Lions seem to do best; lying around doing very little. Winding our way back we saw Sooty Chat, Yellow-fronted Canary and Striped Kingfisher, all new for the trip. A Black-bellied Bustard gave us a rendition of its amazing cork popping/water drop call.

## Day 10

Saturday 17th November

### Serengeti National Park (Lobo area)

#### Hot & sunny

Very early start today, leaving the lodge at 0600 to make the most of the dawn light. Some dour looking Buffalo were the first mammals we saw catching the first of the days sunlight. Shortly after, a pair of White-headed Vultures soared into the sky and a Grey Kestrel perched obligingly nearby. As the sun rose higher we came across a Wattled Lapwing on the track; Pied Wheatears most of which were in breeding plumage; and a pair of Ruppell's Glossy-starling. On our return, we came across a hyena den complete with a couple of pups that were almost cute.

After a late breakfast (including Mocking Cliff-chat with our coffee and a Vervet Monkey sneaking in and stealing a bun!), a little walk around the grounds proved profitable with a short, but good view of African Paradise-flycatcher and a pair of soaring Verreaux's Eagles. Not everyone had gone on the walk and seen the Eagles, so it was good that soon after the start of the afternoon game drive, we spotted a further two (another 'lifer' ticked off for Margaret). A very smart Temminck's Courser was seen, but it seemed fairly quiet birdwise. We therefore opted to return to the hyena den where we saw three cubs in the sunset along with baboons leaping up and across the near vertical rock faces to find safe places to sleep. There was also a fly-over by a pair of African Green Pigeons, the only ones for the trip.

## Day 11

Sunday 18th November

### Serengeti to Ngorongoro Crater (via Oldupai Gorge)

#### Mostly sunny

We said our goodbyes to Lobo Lodge after breakfast. Heading back towards Seronera, it was relatively quiet but we had good views of hyena and some close up giraffe. We stopped at the Seronera Visitor Centre where we enjoyed the tame birds especially the very close up Black-faced Waxbill, Green-winged Pytilia and the Vitelline Masked Weaver building an immaculately woven nest. The wildebeest and zebra on the southern plains appeared to have noticeably increased in number since we passed through a few days ago and there were attendant Lions (including one in the road).

Back at the Naabi Hill gate a Bush Pipit was new for the list. Our picnic lunch stop was the Oldupai Gorge, the 'Cradle of Mankind', where a local guide told us about the history of hominids the area and also told us about the various archaeologists/anthropologists who had worked there and made the place famous.

It is named after the Maasai name for a plant that grows commonly there (a relative of Mother-in-laws tongue), but is often misnamed Olduvai (something our guide was at pains to point out). We also looked around the museum with replicas of many of the fossils found and information about how they helped forge a picture of our early ancestors. There were also a good few birds that joined us for our picnic lunch including Red-and-yellow Barbet and many a Lesser Masked Weaver.

We arrived at the Ngorongoro Wildlife Lodge in time for afternoon tea. The lodge is set in a spectacular location right on the rim of the Ngorongoro Crater with fabulous views into and over it, including from every bedroom. After settling in, a short walk around the lodge grounds proved very productive with Eastern Double-collared Sunbird, Yellow-bellied Waxbill, and Ashy Flycatcher all new for the trip. A splendid Tacazze Sunbird was not new, but still a great spot.

## Day 12

Monday 19th November

### Ngorongoro Crater

#### Hot & sunny (after a cool start)

Some were up early to catch sunrise over the crater. A buffet breakfast was followed by a half hour or so drive (with glimpsed Side-striped Jackal en route) to the descending road and the 600m descent from the rim to the crater floor. We had great views of Schalow's Wheatear and Lanner Falcon towards the bottom of the road and it was wonderful to finally be inside this very beautiful and special place. The morning drive was punctuated with a series of excellent sightings that included both Lions and Spotted Hyenas in mud, probably trying to cool off since, apart from an area of woodland, there are few trees in the crater base. We also spotted a couple of large 'rocks' that eventually got up, sported their characteristic Black Rhino horns, and walked slowly off. Near a small pool there was a single Black-crowned Night Heron and a whole host of Sacred Ibis and Blacksmith Lapwing along with a scattering of Long-toed Lapwing and Anteater Chats.

Lunch was a picnic at Ngoitokitok Springs and lake, a very popular picnic spot with attendant Black and Yellow-billed Kites ready to snatch a piece of sandwich or chicken from the hands of any unsuspecting tourist. Picking up the crumbs dropped were the rather less daunting Rufous-tailed Weavers, Speke's Weaver and a lone Helmeted Guineafowl. A short post lunch walk to the water's edge gave us good views of Fan-tailed Widowbird (some almost in breeding plumage) and a Plain-backed Pipit.

It was then time to slowly make our way back to the rim and lodge via the ascending road. Nearing the base we noticed several Lions under a tree but two had walked away up a shallow valley parallel to the track and in the direction of some Buffalo, it appeared they could be hunting. We drove up the track a short way, so that the valley and the Buffalo were to our right. The next we knew was that the Buffalo were stampeding towards us and up and over the rise came the two hunting Lionesses. Right behind our van, one managed to get its claws into the rump of a young Buffalo and it looked like curtains. Yet, amidst a flurry of hooves and dust, it managed to escape and the herd formed a protective circle around it, and the other youngsters. There then followed a tense 'toing' and 'froing' as the Lions (now bolstered in numbers from the pride under the tree) charged and the Buffaloes retreated and then the Buffaloes charged and the Lions retreated. After some 20 minutes of this, the Lions appeared to call it a day and the Buffalo herd moved cautiously off. A classic end to our first day in the crater!

## Day 13

Tuesday 20th November

### Ngorongoro Crater

#### Hot & sunny (after a cool start)

Hassan had kindly agreed to drive and guide us on another full day in the crater, so after breakfast off we went again and saw perhaps the same Side-striped Jackal on the way (a better and longer view this time!). As we neared the bottom of the crater we spotted a Cheetah lolling about in the long grass. We watched for a while but it did not seem that it was going to do much, so we moved on. Driving through another area of long grass Graham spotted a movement and an odd shape. We stared at it for a while, trying to decide if it was a log or a creature... and then it moved, not something logs do very often. It was a Serval! The second of the trip and this is usually a tricky cat to spot.

Moving on, we drove through herds of many Wildebeest and Zebra and at one point there was much consternation amongst a group of them. Then we spotted the Hyenas that were chasing them around, trying to find any that seemed slow or weak, but they failed to do so. A short while later, a lone Hyena, possibly from the group we were watching, passed right behind our van. Moving through another herd of Wildebeest and Zebra, we spotted a couple of Black Rhino lying amongst them. Soon after, they got up and walked slowly in vaguely our direction, eventually giving fairly close views.

Lunch was again a picnic at Ngoitokitok Springs with attendant weavers and kites. We then slowly drove back and, in roughly the same area, were probably the same Lions, but today no Buffalo or hunting action. Near the Lodge we had a fleeting glimpse of a Schalow's Turaco. Later, we had a walk around the grounds to see if we could spot it again, but it was not to be. However, we did see some lovely birds including Bar-throated Apalis, Brown-backed Woodpecker and Montane White-eye.

## Day 14

Wednesday 21st November

### Ngorongoro to Nairobi (via Gibbs Farm)

#### Hot & sunny

Our time in the Ngorongoro area had sadly come to an end. We made our way via the town of Karatu to the wonderful Gibb's Farm. Established as a coffee farm in the late 1920s it has now been refurbished as a warm, rustic luxury inn. However, it still produces coffee and has an extensive organic vegetable garden that produces much of the fresh produce for the inn. We took some freshly brewed coffee on the lawn overlooking the flowery gardens and birdwatched from our comfy seats! We saw Black Sawwing, White-browed Robin-chat, and lovely Collared and Bronze Sunbirds.

An employee (Honest) then took us on a tour of the organic vegetable garden. Here the familiar, such as carrots, grew side by side with the unfamiliar, such as tamarillo (tree tomato). We also saw how coffee was processed from a red berry on a bush to the dark brown coarse powder we spoon into our cafetières. We also learned how they try to deal with their pest problem. Where we have slugs... they have Elephants! Birds were not ignored; we added Arrow-marked Babbler and Common Waxbill to our list.

A sumptuous buffet lunch was taken on the lawn in the company of White-tailed Blue-flycatcher and African Paradise-flycatcher and all too soon it was time to depart this lovely place and continue our journey to the airport. Hassan took it slow and steady and we got to Arusha town at a very busy rush hour. We had just enough time to stop at a compound where we freshened up, got changed and said our goodbyes and our many thanks to Hassan. Then we were off to the airport with driver Willy in a transfer minibus. We dropped off Margaret and Eileen (who were on a later flight) at a very posh looking hotel and wished them well. Shortly after sunset were boarding for the flight to Nairobi and having coffee in the Nairobi airport terminal. Later that evening it was boarding time again for the overnight flight to London.

## Day 15

Thursday 22nd November

London. Grey and cold

Our plane arrived on schedule at London Heathrow at around 0545 after a fairly full, but comfortable flight. We said our goodbyes to each other at the baggage reclaim and went our separate ways with fond memories of what had been a great trip.

## Receive our e-newsletter
